

QUICK HITCH

Product Introduction

- ◆ Electronic drive system is installed in the cab, the expensive hydraulic pressure is replaced by the electric power, which saves the cost from the production. Operators in the cab can easily turn on and turn off the quick hitch through the switch.
- ◆ Check valve Protection System: each cylinder installed safety check valve ensures That quick hitch coupler can work when the oil circuit and the circuit is cut off.
- ◆ Safety Pin Protection System: security protection is customized for each excavator according to the different parameters. In the case of the failure of cylinder ,quick hitch coupler can work regularly.

ROTARY MILLING RIG

Product Introduction

BY serious of rotary milling drivers is a new generation of rotator which is researched and developed by BEIYI machinery. It has enough strength which can be widely used in tunnel engineering, canal works and metope milling dig etc. It is a kind of long service life, high strength, maintenance simple spinner. When BIEYI machinery special rotating rotor combined with milling drivers, rotating milling drivers can be located in the best position of milling dig. All types of rotator can use milling drivers infinite rotating hydraulic rotary joint.
