

HYDRAULIC PULVERIZER

Excavator Attachment
BY-HC200

Working Principle

Hydraulic Pulverizer is the perfect second rescue equipment. The most effective way of second rescue is separating the reinforcing steel. All of the hydraulic forceps use high quality steel and has excellent wear resistance. Hydraulic pulverizer series products is the most powerful tools in the similar products, using high quality and performance oil cylinder to meet the demands of different working conditions.

Large sawtooth, crushed completely, hydraulic steel cut, very sharp, reinforced concrete, separation recycling, large oil cylinder, easy and simple to handle, double efficiency, ultralow noise, minimum vibration, sturdy and durable, disassembling easy, super features, demolition of essential.

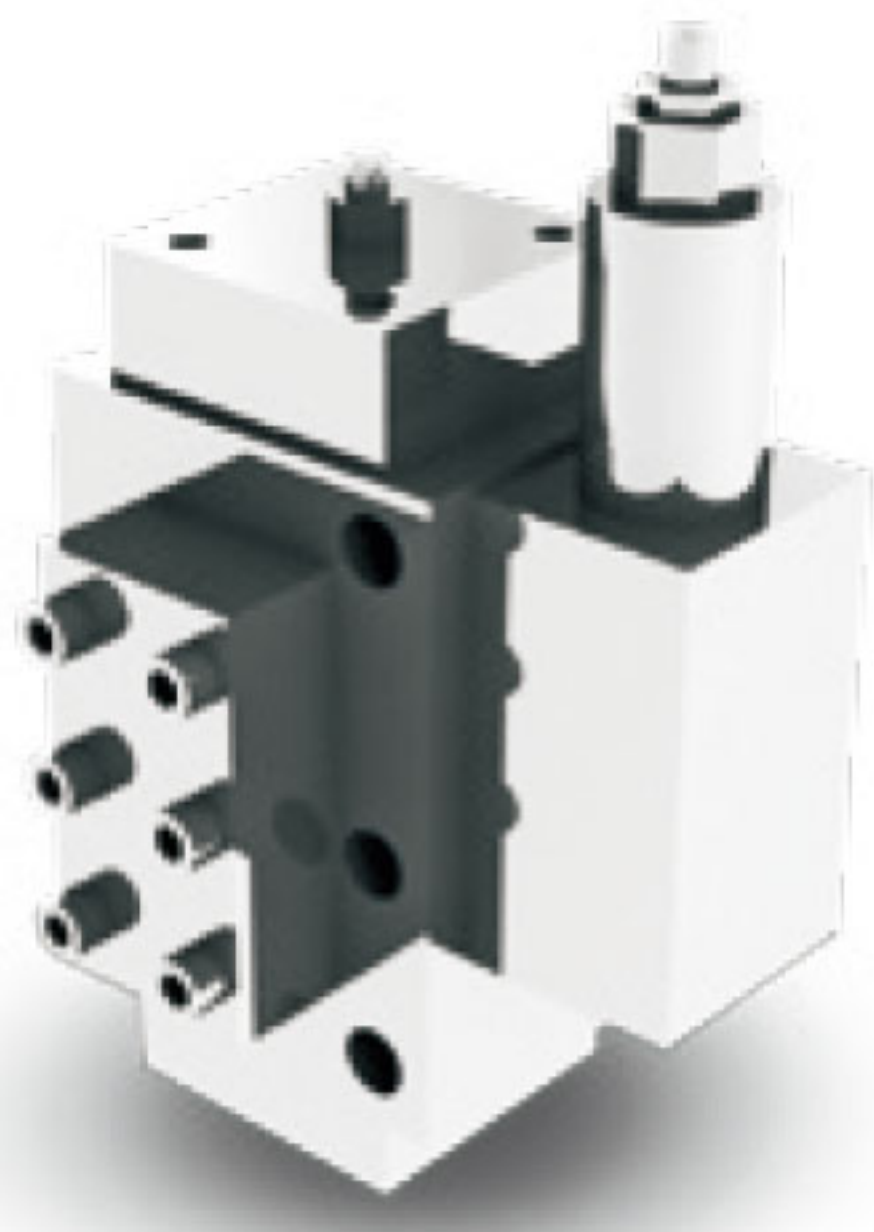

Strong strength, big up and close of the mouth, sturdy and durable, lightweight and quick speed! Ace products, Ace warranty!

We improved the structure according to the existing hydraulic concrete pulverizer. At the same time to improve construction efficiency, it can cut the rebar in the broken concrete construction, which solved the existing Hydraulic pulverizer problem of can't clearing away the rebar in the broken concrete construction and the technical problems of low construction efficiency.

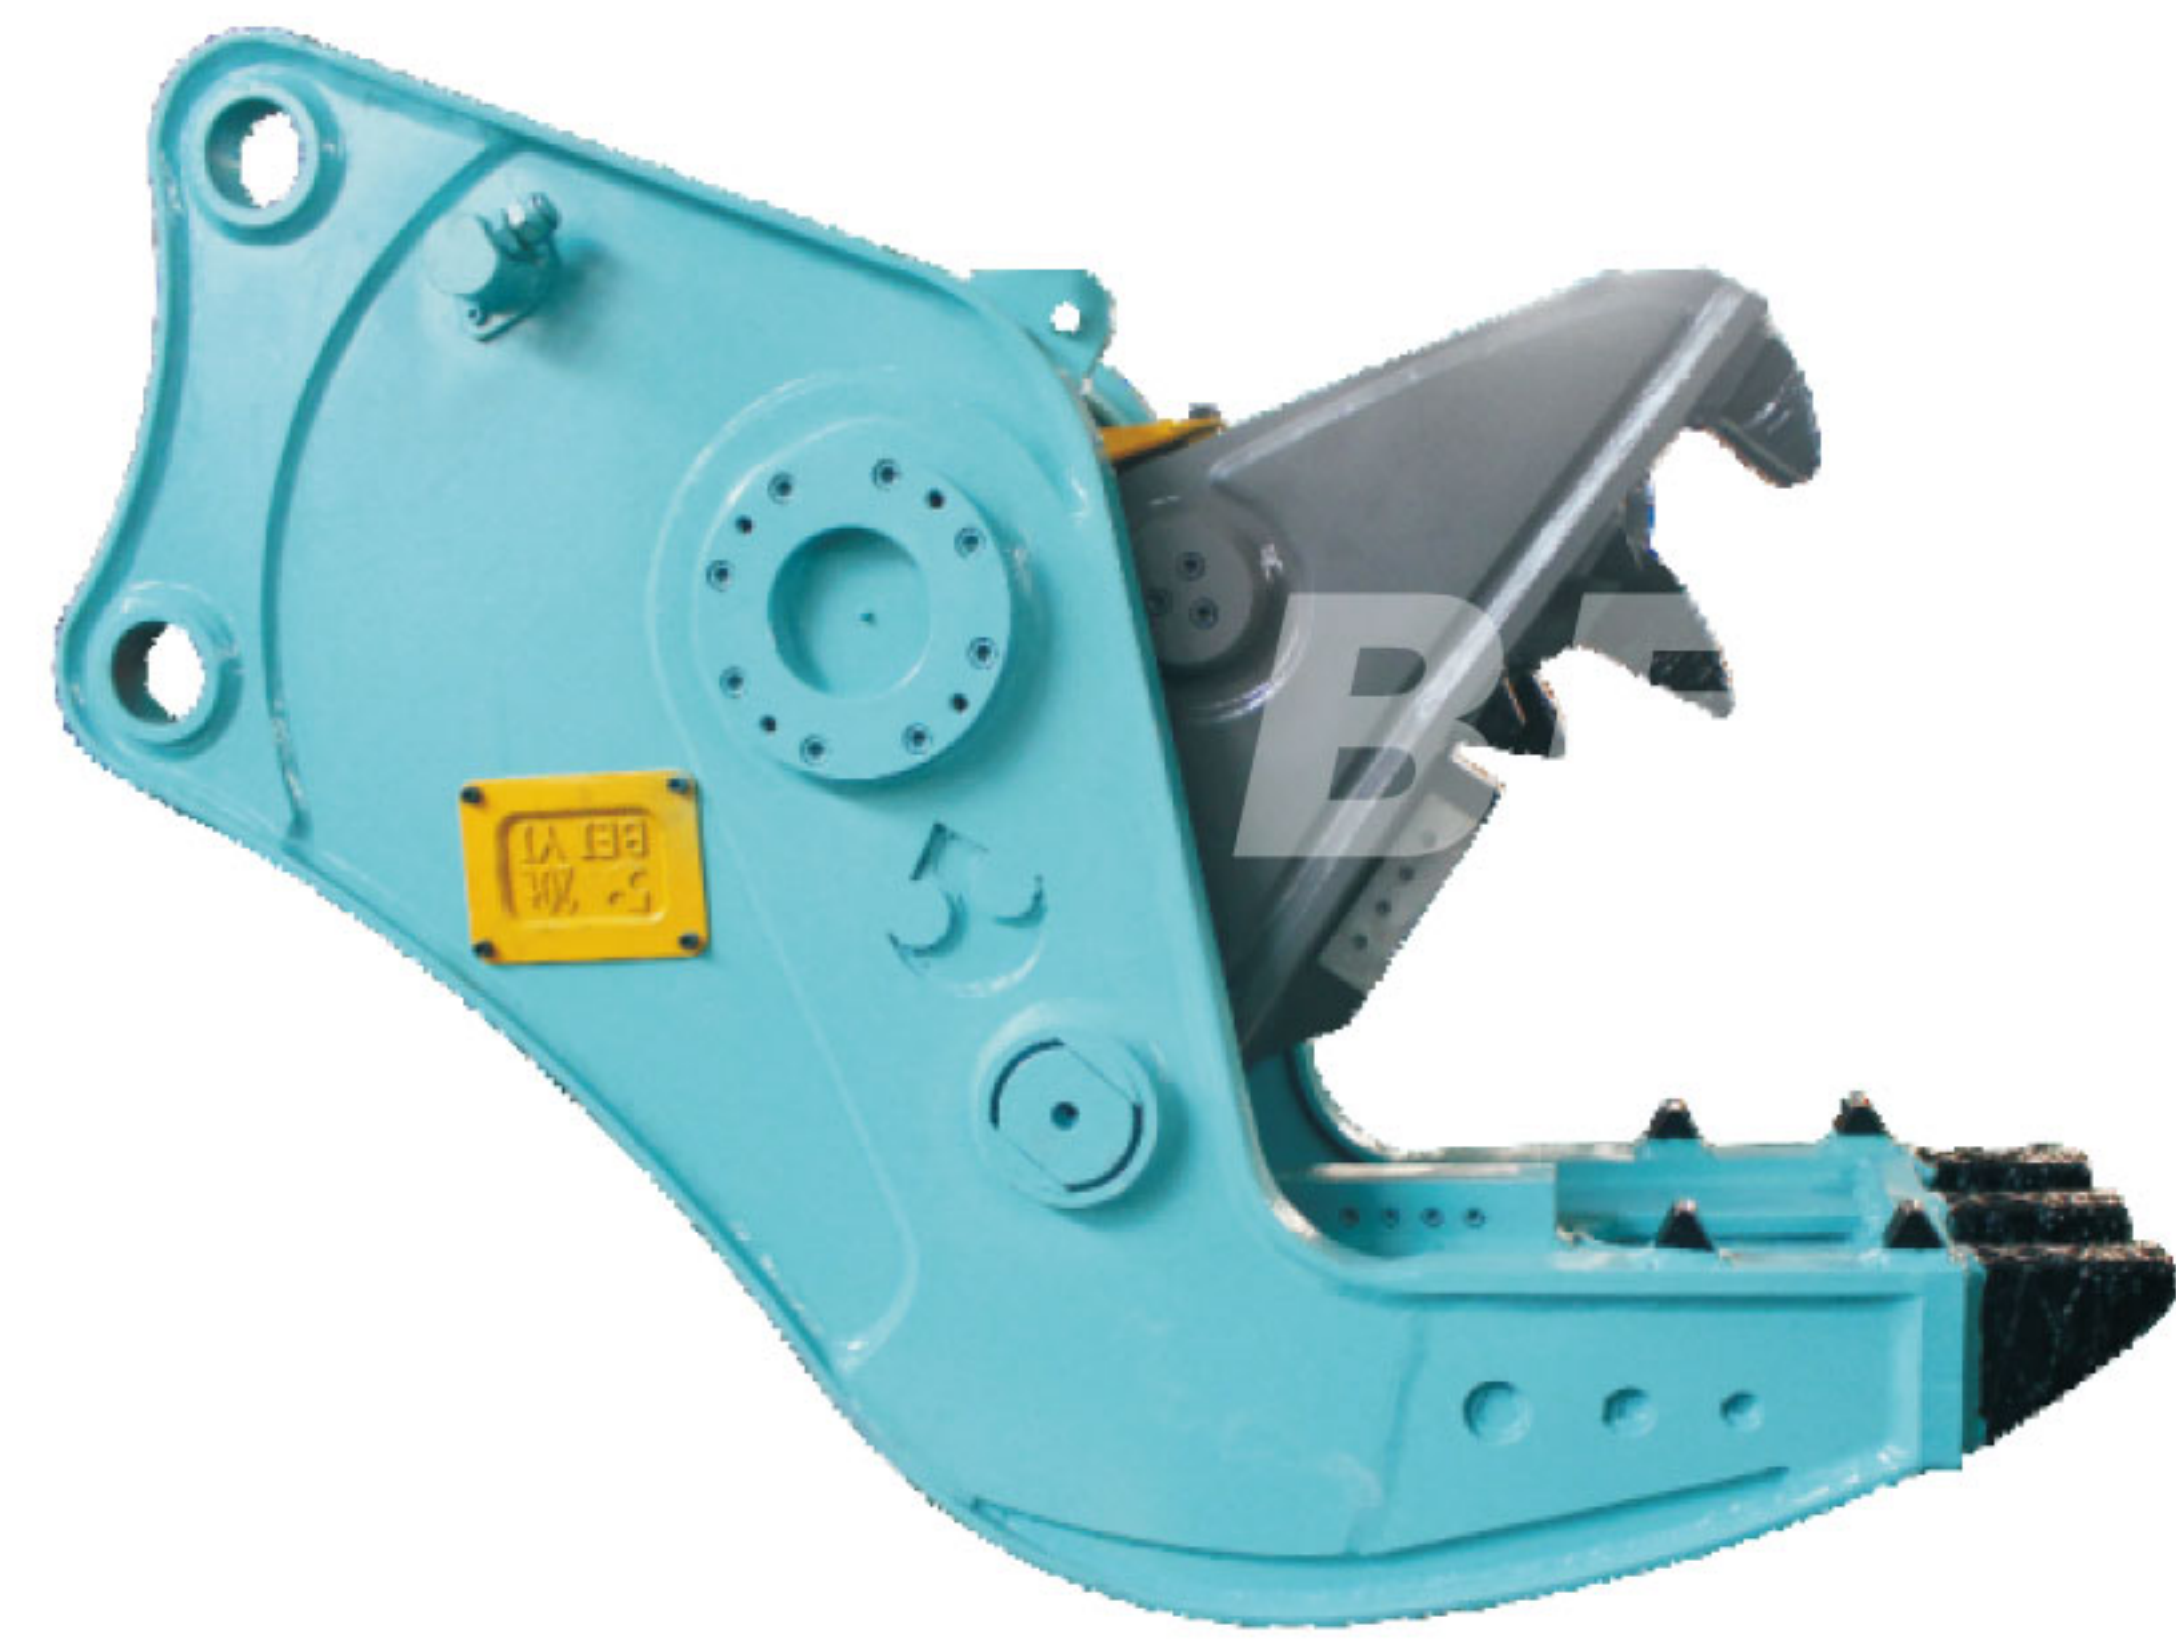

Model	Total weight	Total length	Max opening width	Breaking force	Hydraulic pressure	Suitable excavator weight
	KG	mm	mm	KN	MPa	T
BY-HC120	700	1400	450	60	32	8-15
BY-HC150	1000	1500	650	60	36	12-18
BY-HC200	1620	1800	750	79	34	18-25
BY-HC300	1850	1950	775	100	34	25-35
BY-HC350	2850	2550	1000	115	34	35-45

Product Advantage

- 1.Alloy blade design
- 2.Adopts wide crushing plate and plays the big work efficiency in the work of separating the reinforcing steel and concrete.
- 3.Adopts the advanced wear-resistant high strength material and advanced shape of the design , strengthening the durability of the product, giving play to the biggest crushing force and using flexible under the bad environment.

Speed Valve
The Speed Valve on the cylinder increases cycle times, greatly improving efficiency and productivity of the attachment.
